

10 things you need to know about BladeCenter S...

1

Designed for your business.

Easily consolidate multiple servers, towers and racks into one scalable and manageable solution.

2

Run your entire business.

It supports many applications your company might run including Windows®, AIX®, IBM i and Linux® when you add IBM Blade Servers.

3

Easier to manage.

With server, storage, networking and management tools integrated into a single chassis, it's more efficient to install, and with IBM Director 6.1, easier to run and upgrade your IT environment.

4

Grows with you.

BladeCenter S is configured with six blades, so you have fantastic scalability, yet don't pay for more servers than you need.

5

No server room needed.

It's small enough to fit under your desk, very quiet and plugs into a standard power socket – we've even put the whole thing on rollers.

6

Save money.

Server consolidation with VMware on BladeCenter S can allow companies to reduce cost, improve service, and manage risk. This single-box solution may support 75 workloads with full VMware Vmotion support.

7

Superb performance.

With the IBM Blade HS22 inside your BladeCenter S chassis, your new system can adapt to your application demands, intelligently scaling energy use and offering superior virtualisation.

8

Easy-to-use-tools.

Predictive Failure Analysis® and Light Path Diagnostics™ make it easier to resolve potential issues before they become disruptive.

9

Mix-and-match.

Slot in your choice of the industry's most diverse set of blades including the HS22, HS12 or JS12.

10

One size does not fit all.

IBM offers great flexibility in chassis, blades, storage, availability, legacy support and more.
